

NISDA implemented security changes on the Primavera server eliminating less secure protocols (SSL 2.0, TLS 1.0 and 1.1). Given these changes, some users have experienced issues when opening CM the left navigation windows **Error: Click for details**.

To resolve this issue, Java and Internet Explorer settings need to be adjusted on each users' computer.

JAVA Setting

Click on the Windows Start button and type Control Panel → **select Java** → **select the Advanced Tab** → scroll to the **Advanced Security Setting** and **select TLS 1.2** (users can **deselect Use SSL 2.0, TLS 1.0, TLS 1.1** which are no longer used)

Internet Explorer Settings
