

JAVA SECURITY CHANGES

Security changes on the Primavera server were recently completed to eliminate less secure protocols (SSL 2.0, TLS 1.0 and 1.1). Given these changes, some users may see the following message in the left navigation windows **Error: Click for details**.

To resolve this issue, Java settings need to be adjusted on each users' computer.

Run Control Panel → Java → **select** the Advanced Tab → scroll to the **Advanced Security Setting** and **select** TLS 1.2 (users can **deselect** Use SSL 2.0, TLS 1.0, TLS 1.1 which are no longer used)
